EDUCATION

Mount Royal University

Bachelor of Science in Computer Science

- President's Honour Roll 2025, Cumulative GPA: 3.8

Calgary, AB

2021 – 2026

EXPERIENCE

Software Developer Intern

May 2025 – August 2025

Muddy Boots Inc.

- Developed and integrated application features in a Ruby on Rails codebase following MVC architecture, using RSpec and Cypress for backend and end-to-end testing with staging validation.
- Designed and implemented a shared JavaScript signature capture module integrated across Vue and Rails components, encoding drawings as compact SVG coordinate data and reconstructing them for PDF rendering.
- Built a company affiliations CRUD interface with record ownership tracking using Rails schema migrations, eliminating the need for developer-run production scripts.

Data Engineering Analyst

January 2026 – April 2026

Hoodo, Work Integrated Learning

- Engineered data-preparation pipelines using pandas and MySQL, cleaning and transforming 35k+ job records into ML-ready datasets with feature engineering and outlier handling.
- Developed and evaluated regression models (Linear Regression, Random Forest, Gradient Boosting, CatBoost) using scikit-learn, applying cross-validation and metrics including MAE, RMSE, and R^2 .
- Documented model assumptions, error analysis, and system limitations in a formal report aligned with Alberta Machine Intelligence Institute (AMII) project validation standards.

PROJECTS

Financial Analysis Dashboard | *Python, Shiny, pandas, NumPy, Docker*

Senior Project

- Developed a modular Python web application for financial analysis with reactive UI/server separation, market-data retrieval, and interactive risk metric visualizations.
- Containerized the application with Docker and deployed it as a portable web service hosted on AWS.

Computer Vision Electrical Schematic Parser | *Python, YOLO, ONNX, XML*

Class Project

- Built an end-to-end computer vision pipeline for detecting components in hand-drawn schematics and exporting structured XML outputs.
- Implemented dataset preparation, annotation conversion, model training, inference, and ONNX export for deployment-ready workflows.

F1 Dashboard Web Application | *JavaScript, HTML, CSS, APIs*

Class Project

- Developed a web application that displays Formula 1 data through public API integration and interactive frontend rendering.
- Applied asynchronous data fetching, DOM manipulation, JSON data handling, and responsive web interface design to present external data effectively.

Health Tech Accessibility Challenge | *Customer Discovery, AutoCAD*

Innovation Project

- Addressed an accessibility-focused problem statement by conducting customer discovery and identifying user pain points in a health technology setting.
- Shaped a hardware-oriented solution around validated needs, usability concerns, and practical delivery constraints.

SKILLS

Languages: Python, JavaScript, C++, Java, Ruby, Haskell, SQL, Assembly.

Frameworks: Ruby on Rails, Vue, Node.js, Express, Tailwind CSS.

Libraries: pandas, NumPy, scikit-learn, Matplotlib.

Developer Tools: Docker, AWS, Git, Linux, Jira.
